Scroll **Sites**

Key Features

- Choose from flexible, ready-to-use themes for help centers, blogs, or field service support
- A visual theme configurator to customize and brand your site - no coding knowledge needed
- Apply custom CSS or JS to extend customization
- Use your own domain and add integrations for analytics, search, and support
- AI-powered search for faster content discovery
- Deliver versioned, translated, or conditional content with Scroll Documents
- Embed content in your app or website
- Publish OpenAPI-compliant developer docs

Target Customer

Teams that want to publish their collective knowledge to a customized website.

Pricing

- Flat fee (up to 10 users) at USD 20.00 per month
- For 11-100 users: **$2.50** per user per month

Overview

Scroll Sites transforms Confluence content into branded, responsive websites. Choose a theme, customize it, and go live in minutes – no coding needed.

How We Win

- **Fast and reliable static sites** – Scroll Sites are deployed independently from Confluence, so they load quickly and stay available even if Confluence is down.
- **No coding required** – The visual theme configurator lets anyone customize and brand a site without web development skills.
- **Beautiful themes** – Out-of-the-box themes make sites look great by default and are quick to implement.
- **Advanced integrations** – Works with other Scroll apps to support versioned, conditional, and multi-language content.

Competitor Weaknesses

- **No flexible authentication options** – Competitors require public access or Atlassian logins. Scroll Sites supports SSO and token login method.
- **No publishing flexibility** – Competitors publish automatically with every Confluence release. Scroll Sites allows automated or manual updates.
- **Accessibility issues** – Competitor sites often fail WCAG standards. Scroll Sites is tested against them.
- **Low SEO score** – Competitor tools often lack meta description or options to adjust them, lowering SEO scores.

This page is not part of the template and won't affect your exports

This content was exported from Confluence using Scroll PDF Exporter

- To get the most of this Scroll PDF Exporter template: set up your brand and your logo and brand colors will be used automatically.
- Want to have more control over how your Confluence content is exported? Take a look at Scroll Exporter Extensions. With these macros you can insert page breaks, ignore content from your export, and more directly in your Confluence content.
- This template uses custom placeholders that are set by the content/page properties from the Confluence page template with the keys "**Product logo**" and "**Overview**".
- Have suggestions on how to improve our templates or a use case we have not covered? Contact us at support@k15t.com
