Scroll Versions 2.5 Release Notes

May 2014

We are proud to announce Scroll Versions 2.5. This release is focused on Confluence cluster compatibility and performance improvements.

Highlights in Scroll Versions 2.5

- Import Existing Content to a Target Version
- Publish a Language to an Existing Space with Different Languages
- Multiple Usability Improvements and Bug Fixes

More Info

- Issues resolved in this release

Compatibility Info

Scroll Versions 2.5 is only compatible with Confluence 5.0 or higher.

Scroll Lookup Index

After installing Scroll Versions 2.5 the Scroll Lookup Index is rebuilt. The duration of rebuilding this index depends on the number of pages and the spaces managed with Scroll Versions are not available until the index is finished.

In Detail

1

Import Existing Content to a Target Version

Feature Availability

This feature is available only when running Scroll Versions on Confluence 5.3 or later.

Finally it’s possible to easily import your existing content to a specific target version in Scroll Versions. Doc-Admins can now import Confluence content using a simple REST-URL to a specific target version in a Scroll Versions managed space. Migrating your existing documentation to Confluence and Scroll Versions has never been easier.

Unable to locate Jira server for this macro. It may be due to Application Link configuration.

2

Publish a Language to an Existing Space with Different Languages

If you are using Scroll Translations, you can now publish a specific language to an existing space, even if the target space has different languages than your source space. Previously you had to define the same languages in both spaces, but Scroll Versions 2.5 now simplifies the collaboration with external translators immensely.
Multiple Usability Improvements and Bug Fixes

In Scroll Versions 2.5 we implemented multiple smaller improvements and bug fixes regarding usability and error messages:

- The mouse cursor does not change on hovering over the group selector icon:
  
  Unable to locate Jira server for this macro. It may be due to Application Link configuration.

- Show a loading icon if the page navigation will be reloaded:
  
  Unable to locate Jira server for this macro. It may be due to Application Link configuration.

- Improve error message if a page does not match the naming pattern:
  
  Unable to locate Jira server for this macro. It may be due to Application Link configuration.

- Attachment item and permission item is not displayed:
  
  Unable to locate Jira server for this macro. It may be due to Application Link configuration.
