Scroll Versions 2.4 Release Notes

May 2014

We are proud to announce Scroll Versions 2.4. This release is focused on Confluence cluster compatibility and performance improvements.

Highlights in Scroll Versions 2.4

- Cluster Compatibility
- Improved Scroll Lookup Index handling
- Performance improvements

More Info

- Issues resolved in this release

Compatibility Info

Scroll Versions 2.4 is only compatible with Confluence 5.0 or higher.

Scroll Lookup Index

After installing Scroll Versions 2.4 the Scroll Lookup Index is rebuilt. The duration of rebuilding this index depends on the number of pages and the spaces managed with Scroll Versions are not available until the index is finished.

In Detail

1

Cluster Compatibility

Scroll Versions is now fully compatible with clustered Confluence systems:

Unable to locate Jira server for this macro. It may be due to Application Link configuration.

2

Improved Scroll Lookup Index handling

In Scroll Versions 2.4 we've fixed multiple issues and improvements regarding the Scroll Lookup Index. The Scroll Lookup Index is used to find pages and their relationships.

- Users are now able to rebuild the Scroll Lookup Index manually:

Unable to locate Jira server for this macro. It may be due to Application Link configuration.

- Multiple other improvements:
3

Performance improvements

• Improved loading of page info panel:

   - Unable to locate Jira server for this macro. It may be due to Application Link configuration.
