Welcome to the Scroll Viewport Developer's Guide

The Developer's Guide will you get started developing your own Scroll Viewport themes and make them available on the Atlassian Marketplace.

Prerequisites

Make sure you have

- set up a Confluence development system,
- installed Scroll Viewport, and
- create a space with a few pages and (optionally) a few blog posts.

Table of Contents

- Getting Started Guide
- Template Reference
  - Page Context
  - Blog Overview Context
  - Search Context
  - Error Context
  - Placeholders
- Template Recipes
  - Templates
  - Navigation
  - Search and SEO
  - Confluence/Viewport macros and features
  - (External) files and media
  - Integration with other Scroll Add-ons
  - Integration with third-party software
- Advanced Topics
  - Advanced Content Rendering
  - Theme Guidelines
  - Develop Pluggable Placeholders
  - Override the default Viewport Control Opener
  - Template: List of Supported Macros
  - Overriding the output of Macros
  - Theme Properties
  - Adding and Reading Viewports using the REST API
  - RSS Newsfeed
- Troubleshooting
  - Umlaut Encoding for POST Requests
  - Uploading Themes via FTP is slow
- Theme Development FAQ
- Develop with the Theme Editor
